## Education

### NEW JERSEY INSTITUTE OF TECHNOLOGY

- Expected Graduation: May 2020
- Major: BS Computer Science
- GPA: 3.76

## Technical Skills

**Programming Languages:** Python, Java, C#, HTML, CSS, JavaScript, SQL

**Frameworks/Libraries:** React, Bootstrap, Express

**Software/Environments:** Node.js, Unity3D

**Version Control:** Git

**Relevant Courses:** Database Design and Management, Computer Networks, Data Structures and Algorithms

## Experience

### CLASSROOM ASSISTANT | NEW JERSEY INSTITUTE OF TECHNOLOGY

Sep 2017 – May 2018

- Taught Python to introduce students to coding foundations such as data types, functions, modules, file reading, debugging, namespaces, and classes.
- Evaluated and debugged students' codes on a weekly basis, giving guidance in class and recitation meetings.
- Collaborated with a team of professors and assistants to schedule and grade hundreds of exams and assignments.

## Projects

### EXAM MANAGEMENT PLATFORM

December 2019

- Created a full stack web application for classroom exam management.
- Coordinated within a group of three to meet sprint deadlines, managing and scheduling meetings.
- Designed and coded the frontend using HTML, CSS, JavaScript, and PHP.
- Stored user information in a MySQL Database.

### PHOTO SHOP DATABASE

April 2019

- Designed a database for a web-based photo shop given a set of data and functional requirements.
- Worked within a group of three to develop a full stack web application.
- Utilized HTML, JavaScript, PHP, and SQL to create, search, update, and delete entries within the database.
- Applied schema analysis, normalization, and SQL queries.

### HTTP CLIENT AND SERVER

October 2018

- Made HTTP client and server programs in Python that handled GET requests through TCP sockets.
- Handled file transferring using encoding and decoding.

### LEXICAL ANALYZER

April 2018

- Created a C++ program that ran source code utilizing the ruleset of a pseudo-coding language.
- Converted source code into tokens, distinguishing types, operators, and statements.
- Evaluated tokens through a parse tree giving desired output in error messages, print statements, setting variables, and math operations.
